Kinexon Data Exploration & Reporting Project

Vaughn & Kya

Global Load and Intensity Process (For reporting)

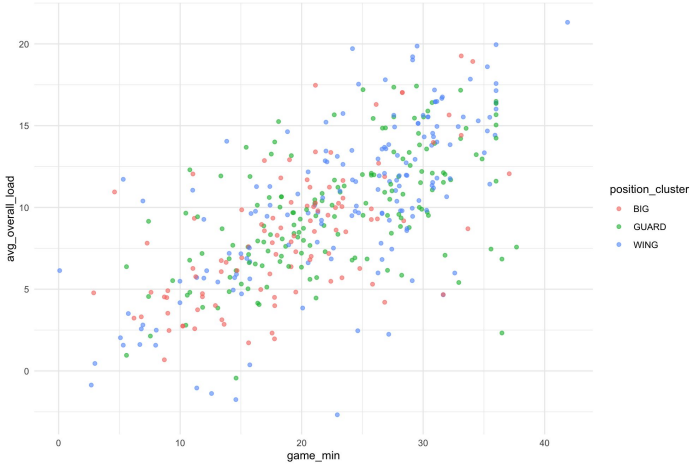

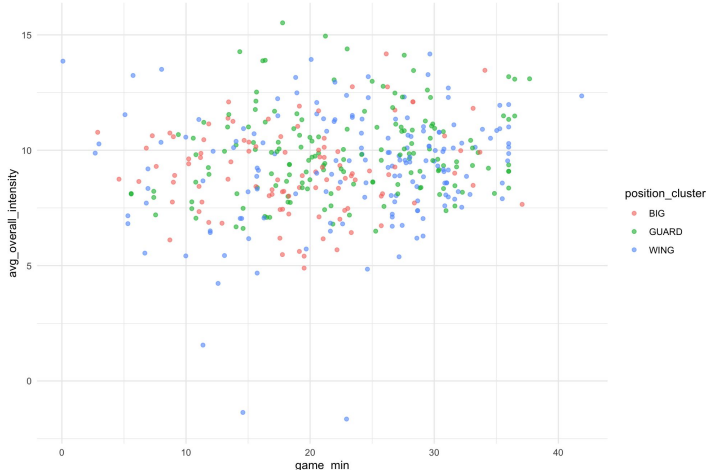

Overall Load:
- THIL
- AAL
- Decel Load
- FCT
- Exertions

Overall Intensity:
- THIL/AAL
- High Accelerations(>6.43ft/s^2)/Total
- High Decelerations (>-6.43ft/s^2)/Total
- High intensity exertions/Total

Exploratory Association Graphs (R Studio)

Next Steps

1. Build a similar reporting structure within smartabase
2. Put together reference tables by position (i.e this amount of AAL/THIL/Decel Load is usually equitable to this load score)
3. HPD Interest:
    a. How each metric is comparable to a game for an athlete (i.e this session was % of a game for this player)
        i. For RTP monitoring purposes?
    b. Preseason Periodizations (Load Accumulation?)

Any other thoughts to make this actionable for our department? How can we add more value to the data we collect?
